Table of Contents

I. Cost Management ........................................................................................................... 7
  Contract management is a challenging but critical component of cost control .......... 9
  Formula for successful cost control includes hard data plus surgeon champion .......... 12
  ASC industry no longer the stepchild of group purchasing organizations .......... 15
  Collaborate with surgeons and vendors to control high-end supply costs .......... 17
  Taking small steps to control supply costs yields a much better bottom line .......... 20
  Strong capital purchasing process calls for partnership, transparency .......... 23
  Hospitals losing on physician preference items .......................................................... 26

II. Implant Management ................................................................................................. 27
  ORs could see benefits from FDA’s UDI system ......................................................... 29
  FDA issues Unique Device Identification final rule ....................................................... 31
  First step taken in FDA-issued unique device identification system ......................... 33
  Orthopedic implant overhaul nets cost savings and surgeon satisfaction .......... 35
  Orthopedic hospital uses ‘price point’ strategy to lower implant costs ...................... 37
  Survey finds surgeons largely unaware of orthopedic device costs ......................... 40
  For implants, balancing choice and cost control ....................................................... 41

III. Sterile Processing .................................................................................................... 45
  CMS replaces flash sterilization with IUSS ................................................................. 47
  Environmental cleaning in sterile processing areas ..................................................... 50
  Improving instrument readiness cuts case delays, boosts surgeon satisfaction .......... 53
  Using chemical sterilants and high-level disinfectants in health care facilities .......... 56
  Sterile processing questions and answers ................................................................. 59
  Unprocessed tray incident prompts investigation, leads to process improvements ....... 62
IV. Supply Chain/Inventory Management

Learning from Leaning: Case cart readiness improves after barriers are removed

Kanban: The secrets of a strong OR supply system

Kanban: A fresh approach to case cart assembly

OR supply cabinets: Just enough of the right stuff

Kanban, ‘pick paths’ aid OR supply management

Tackling perioperative supply chain as a system

V. Technology Management

Automating sterile processing for safety, efficiency

‘Intelligent OR’ taps technology for patient and material logistics

VI. Value Analysis/Standardization

Standardizing to control costs of spinal implants

A checkup for your OR’s value analysis process

VII. Vendors

Best practices lead to greater consistency in vendor credentialing

Successful vendor/OR partnership yields more than $1 million in savings
